How to Get Gap Sense on Your Phone

A short guide for people taking part in the study.

Short sentences. Simple words. Written to be read with a screen reader, or read aloud to you. Installing takes about two minutes.

If you have an iPhone

The app is shared through **TestFlight**. TestFlight is Apple's own app for trying apps before they are in the App Store. It is free and safe.

Step 1. Get TestFlight

1. Open the **App Store**.
2. Search for **TestFlight**.
3. Press **Get**. It is free.

If you already have TestFlight, skip this step.

Step 2. Open the Gap Sense link

The link is:

https://testflight.apple.com/join/wYreYpF6

1. Open the link on your iPhone. You can tap it in a message or an email, or type it into Safari.
2. TestFlight opens.
3. Press **Accept**.
4. Press **Install**.

Gap Sense now appears on your home screen. Open it like any other app.

Step 3. Check vibration

1. Open **Gap Sense**. The first time, it tells you the app is for use with your O&M Specialist. Press **I understand**.

2. Find the **person** button at the top of the screen. It opens **Accessibility**.
3. **Vibrate on cue** is already on.
4. Press **Test haptic pulse**. You feel one knock, then three knocks, then one long buzz. Those are the three signals the app uses.

Good to know

- **The silent switch.** The app plays its sounds even when the side switch is on silent. If you hear nothing, check the volume buttons.
- **The app expires after 90 days.** This is a TestFlight rule, not a fault. If it stops opening, tap the link again and press **Install** again.
- **Updates.** When a new version is ready, TestFlight tells you. Open TestFlight and press **Update**. To check your version, open **Help** in the app and read **About**.
- **A link from your instructor.** If your instructor sends you a setup link, tap it. If it opens in Safari, choose **Open in the Gap Sense app**.
- **TestFlight may ask for feedback.** You can ignore that. Your instructor will ask you in person.

If you have an Android phone

The app comes as a file called **GapSense-android-debug.apk**. Download it from:

https://github.com/meazizul/Gap-Sense-Crossing-Practice/releases/download/v1.0-build8/GapSense-android-debug.apk

1. Open the link on your phone. The file downloads.
2. Open the downloaded file. Your phone may say **“For your security, your phone is not allowed to install unknown apps”**.
3. Press **Settings**, then turn on **Allow from this source**.
4. Go back and press **Install**.
5. Press **Open**.

Vibration is on from the start. To test it, open **Accessibility** from the person button and press **Test haptic pulse**.

Android phones vary. If you get stuck, ask your instructor. It is a one-minute fix in person.

If you have no smartphone, or you cannot install

You can still try the app in a web browser on any phone or computer. Your instructor has the address. Everything works except vibration.

Your privacy

The app has no account and no sign-in. It sends nothing anywhere. Your practice history stays on your own phone. You can delete it at any time from **Progress**, then **Delete all my practice history**.

The full privacy policy is here: https://github.com/meazizul/Gap-Sense-Crossing-Practice/blob/main/PRIVACY.md

---

What to do next

Read **How to Use Gap Sense**. It explains the three sounds and the four parts of the app. Your instructor has a copy, or you can find it with this guide.
